SQL

Projects

Philly Farmer's Markets

App that displays farmer's markets in Philadelphia on a map with various display filters. The data is pulled from OpenDataPhilly using an ArcGIS API. Built using React and Context API with Google Maps API integration.

Food Truck Tracker

Collaborated remotely with a team of 5 developers as lead frontend developer to deliver an app that connects food truck operators with customers. Built using React with Google Maps API integration. Implemented app-wide state management using Redux. Designed user control flow and built core frontend features.

FoodieFun

Designed and implemented the backend of a food journaling app that allows users to record details, upload photos, and rate restaurants they have visited. Built using Node and Express with a Postgres database. Deployed backend to Heroku.

Weather App

Weather app built with React, Context API, Dark Sky API, and Node/Express backend. The app has a dynamic background that displays a satellite view of the entered location using Google Maps API.

Employment

Key Conservation

Software developer

Remote
May 2020 to Current

- Deliver core app features in React Native and NodeJS
- Refactor and improve existing codebase
- Lead backend migration from AirTable to PostgreSQL database
